## W E L C O M E T O V O G E L A N T R I E B S T E C H N I K

We thank you for your interest in our low backlash gearboxes. VOGEL Antriebstechnik has been highly regarded for more than 70 years offering a wide variety of products to a broad range of business sectors with applications that require innovative, dependable gearbox manufacturing technology. We develop high quality products that are very convincing with their precision, long service life and a high power density. We take advantage of a continuous dialogue with our customers and of constant communication with research and scientific sources.

Our primary focus is to supply you, our customer and partner, with the most cost-effective and efficient product solutions for your needs, in order to safeguard your viability in future markets.

Allow our products and services to win you over.

## FUTURE IN MOTION

Continuity and development are mutually dependent cornerstones of our corporate tradition. For the past 60 years we have been constantly committed to products and markets with maximum quality consciousness. As a mid-sized, family owned company this sense of continuity is highly important to us; the executive management in its third generation accepts personal responsibility for this.

On the other hand we actively determine the future of gearbox manufacturing through our technological developments, thus ensuring market capability for our customers. Because the only valid constant is change.

## PARTNERSHIP FOR TECHNOLOGY

Efficiency and safety from initial discussions of a project to the finished product and beyond – that is the target of our offensive with respect to quality and service management. We initially carry out a thorough, detailed consultation individually in accordance with the requirements of your application. Once the ideal solution is decided upon, we produce flexibly and on schedule, precisely in accordance with your requirements.

Our customers rightly expect smooth and uninterrupted manufacturing processes. You can count on an almost maintenance-free product over the entire life cycle when using VOGEL gearboxes.

Should you still require our support at some stage, there is a world-wide service network available to assist you as soon as possible with a replacement gearbox or an on-site repair. To keep your production line running!

## COMPETENCE IN THE MARKET

VOGEL Antriebstechnik is found everywhere where machinery is built, in all sectors and at all sites. Wherever you manufacture, we will be at your side.

Internationally, our customers are looked after by our distribution and service partner Lenze. That means we have a presence in the important markets and you benefit globally from direct access to our expertise and product ranges.

## INDUSTRY SOLUTIONS

With VOGEL you stay flexible. For example our modular gearbox system offers you the widest variety of combination possibilities. On the basis of these product standards we can also offer you the desired modifications needed for your field of activity. It goes without saying that such services are cost-

optimised and in accordance with your specifications. For unusual requirements we offer entirely individual solutions. In such cases we assess application conditions in cooperation with you, advise you reliably and construct special gearboxes for you, including gear manufacturing.

## S U C C E S S F U L   A P P L I C A T I O N S

Our gearboxes have a broad and constantly increasing range of applications.

- Drive and automation engineering
- Robotics and handling
- Packaging machinery
- Plastics and film processing machines
- Printing machinery
- Paper processing
- Machine tools
- The food and pharmaceutical industry

and many more

## PRODUCT RANGE

The range of VOGEL Antriebstechnik offers nominal output torques of between 10 Nm and 26000 Nm. Our range of standard solutions extends from classic machinery gearboxes, through compact technology for coaxial and right-angle applications, to our own high-precision servo

products. Always in mind: dynamic development of all existing series with the aim of creating optimum drives for our customers, technologically and thus economically.

### SERVO gears

- High speed
- Short cycle times
- Low backlash

### Mechanical gears

- Universal application
- Efficient and reliable

All VOGEL gearboxes can be combined with each other. In this way you benefit from the advantages of various gearbox types.

### Industrial gears

- High torques
- Long life time

### Customer-specific solutions

- Special spiral bevel gearboxes
- Special solution for mobile drive technology
- Special planetary gearboxes for high-speed applications
- Gearing technology

and many more

## Q U A L I T Y

Our internal high standards of quality often far exceed those commonly found in the industry. Because of this extensive and consistent quality control, we are in a position to offer you especially reliable, low-maintenance and durable gearboxes, a factor confirmed again and again in dialogue with our long-term customers.

Our extensive manufacturing expertise within development and production, guarantees noise- and torque-optimised gearing technology at the highest standards. Upon request we can also supply inspection reports or certification for any gearbox, e.g. with respect to run-out error or backlash.

In this way we ensure for you:

- Highest levels of precision and dynamics
- Long product life
- Maximum flexibility
- Maximum environmental compatibility
- Minimal effort for the complete life cycle
- Unbeatable efficiency
- Excellent energy efficiency

## C O N S U L T A T I O N

In every phase of collaboration with VOGEL you benefit from our unique sector-specific expertise, gathered over decades in close cooperation with our national and international partners. We develop concepts together with you for the cost-effective solutions of your application. In this respect we initially analyse and determine the most important environmental parameters such as application conditions, loads, duration of operation, speeds, motion sequences etc. in order to find the best product solution.

## S E R V I C E

Together with our service and distribution partners we make sure that we are there when you need us, whether for supply of parts, repairs and service or technical support, both on a national scale and internationally.

## C O M M U N I C A T I O N

Up-to-date and comprehensive product information, service manuals, catalogues, technical documentation, contact data and quality documents are available to you in a variety of languages via our website. In addition we can provide you with the relevant information on CD-ROM. For technical data exchange we offer over 100 different interfaces and guarantee support for all globally current CAD software programmes, thus shortening development cycles.

## T R A I N I N G

Upon request you can take advantage of individual product and service training as well as general educational courses on drive and automation technology. In addition, we are also always pleased to inform you of intelligent maintenance strategies that will optimise your manufacturing performance. Simply contact our service team.

## S E R V I C E S

### P R E C I S I O N

Maximum precision in every detail – that is what sets all VOGEL gearboxes apart. From optimised product geometry and highly precise, fine ground gear teeth to careful mounting. With improved design and minimised tolerances we achieve a remarkably high torsional and tilting rigidity with minimal noise emission and unbeatably quiet running.

### F L E X I B I L I T Y

Thanks to their practical design and intelligent construction, our low backlash gearboxes can be used variably across a very wide spectrum of applications. With a large selection of motor adapters, multiple drive combinations are possible. A large ratio range with fine increments renders them absolute all-rounders for all sectors.

### C O S T - E F F I C I E N C Y

A high level of efficiency for maximum cost-effectiveness. With optimised concentration on the smallest possible shaft diameter, we achieve efficient results without friction losses and therefore without loss of energy. Economically, VOGEL also convinces with extremely simple motor mounting – thus saving time, which in turn decisively aids your manufacturing processes.

## D U R A B I L I T Y

We place particular emphasis on high quality for all materials, components and parts used. In doing so we are able to guarantee maintenance-free, reliable operation as well as maximum service life even under very high operational stress. Optimal lubrication of gearboxes is guaranteed.

## C O M P A C T N E S S

A compact design, short overall lengths – VOGEL Antriebs-technik offers performance and efficiency on a highly compact scale. This is made possible in no small way by helical gear teeth, allowing greater torques with uniform and low-noise drive motion.

## D Y N A M I C S

With strengthened bearings our gearboxes are able to withstand high forces – even with high speeds and in extreme cases when overloaded. This is possible by the implementation of full needle bearings. Low gearbox weight, combined with compact construction offers enhanced inertia values – further proof of the dynamics of our gearboxes.

# DIMENSIONING AND SELECTION

# DETAILED GEARBOX SELECTION

## 1 Application values

1.1 Definition of the operational area

1.2 Definition of gearbox  
Definition of gearbox type

1.3 Determination of load profile data:  
 $n_{2i}, t_i, T_{2i}$  for all sections of the load profile  
 $i=1$  to  $n$ ,  $n$ =number of sections

1.4 Determination of emergency stop torque of the application  
 $T_{2Not}$

1.5 Definition of nominal speed output  
 $n_2$

1.6 Determination of loads which occur  
 $F_{1rm}, F_{2rm}, F_{1rmax}, F_{2rmax}$

1.7 Determination of drive data of the main engine  
 $P_{Mot}, n_{1Mot}$

1.8 Definition of the gearbox life time  
 $B_n$

1.9 Definition of the application factors  
 $f_A, f_s, f_L$

1

## 2 Calculation of application values

2.1 Determination of max. output speed  
 $n_{2max}$  (max. value of load profile)

2.2 Determination of max. output torque  
 $T_{2max}$  (max. value of load profile)

2.3 Calculation of cycle time  
 $t_{ges} = \sum (t_i)$  Sum of load profile times, incl. idle times

2.4.1 Calculation of average torque from load profile  
$$T_{2m} = \sqrt[6,6]{\frac{\sum (n_{2i} * t_i * T_{2i}^{6,6})}{\sum (n_{2i} * t_i)}}$$

2.4.2 Calculation of the time-averaged torque  
$$T_{2mz} = \frac{\sum (n_{2i} * t_i * T_{2i})}{\sum (n_{2i} * t_i)}$$

2.5 Calculation of average speed from load profile  
$$n_{2m} = \frac{\sum (n_{2i} * t_i)}{\sum (t_{ges})}$$

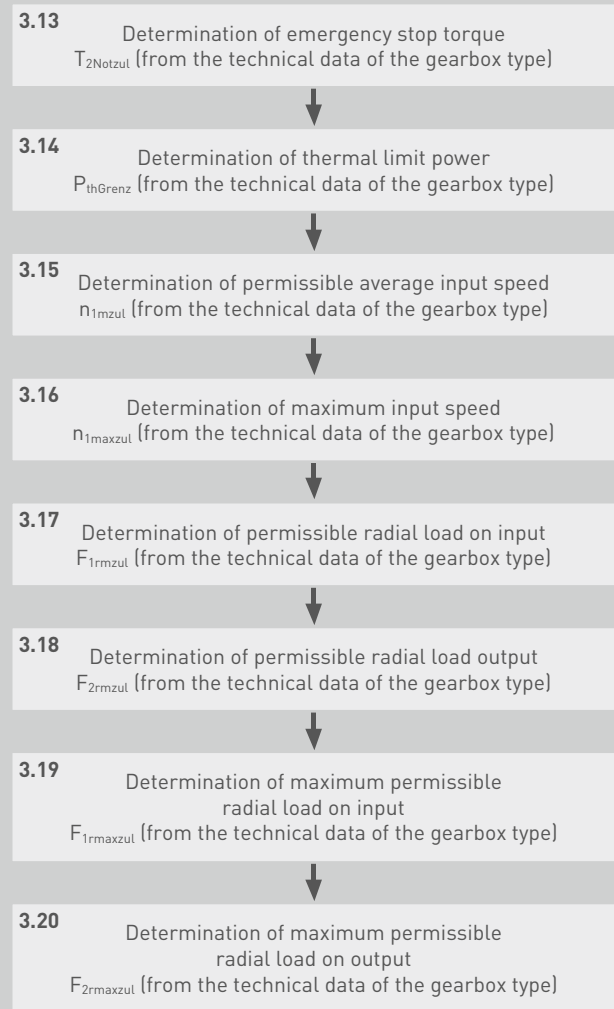

2.6 Calculation of the revolutions under load per cycle > Nominal torque \*  $f_A$   
$$L_{uz} = \frac{\sum (n_{2i} * t_i)}{60}$$
  
Valid for all torques  $T_{2i} > \frac{T_{2Nzul}}{f_0}$  aus 3.4-3.9

2.7 Calculation of revolutions under load  
$$L_u = \frac{B_n * 3600}{t_{ges}} * L_{uz}$$

# CALCULATION EXAMPLE

## 1. Application values

	= Customer parameters	Application	Traction drive toothed rack system
	= Calculations	Gearbox	Spiral bevel gearboxes
		Gearbox type	MH

Collektive	Description	Output speed [ $n_{2i}$ ]* min <sup>-1</sup>	Time share [ $t_i$ ] s	Output torque [ $t_{2i}$ ] Nm
1	Start-up	145	1	1200
2	Transport	290	300	450
3	Stop	145	1	1200
4	Idle	0	300	0
5				
6				
7				
8				
9				
10				

\* Half the final speed or initial speed are used as a basis for acceleration and deceleration procedures

Emergency stop torque output	$T_{2Not}$	$N_m$	1600
Nominal output speed	$n_2$	min <sup>-1</sup>	290
Radial load input	$F_{1rm}$	N	0
Radial load output	$F_{2rm}$	N	3000
Maximum radial load input	$F_{1rmax}$	N	0
Maximum radial load output	$F_{2rmax}$	N	8000
Nominal power main engine	$P_{Mot}$	kW	15,0
Nominal speed main engine	$n_{1Mot}$	min <sup>-1</sup>	1455
Gearbox life time	$B_h$	h	20000
Definition of application factor	$f_A$	-	1,20
Definition of start-up factor	$f_S$	-	2,80
Definition of direction of load factor	$f_L$	-	1,00

## 2. Calculation of application values

Determination of output speed max.	$n_{2max}$	min <sup>-1</sup>	290	Max. value of load profile	1
Determination of output torque max.	$T_{2max}$	Nm	1200	Max. value of load profile	1
Calculation of total cycle time	$t_{ges}$	s	602	$\sum (t_i)$	2
Calculation of average output torque from load profile	$T_{2m}$	Nm	535	$\sqrt[6,6]{\frac{\sum (n_{2i} * t_i * T_{2i}^{6,6})}{\sum (n_{2i} * t_i)}}$	3
Calculation of the time-averaged output torque	$T_{2mz}$	Nm	452	$\frac{\sum (n_{2i} * t_i * T_{2i})}{\sum (n_{2i} * t_i)}$	3
Calculation of average output speed from load profile	$n_{2m}$	min <sup>-1</sup>	145	$\frac{\sum (n_{2i} * t_i)}{\sum (t_{ges})}$	4
Calculation of revolutions under load per cycle $T_{2i} > \frac{T_{2Nzul}}{f_D}$ (values from block 3 required)	$L_{uz}$	1 / Zykl	4,83	$\frac{\sum (n_{2i} * t_i)}{60}$	5
Calculation of revolutions under load	$L_u$	-	578073	$\frac{B_h * 3600}{t_{ges} * L_{uz}}$	5

### 3. Determination of gearbox values

Calculation of ratio required	$i_{erf}$	-	5,017	$\frac{n_{1Mot}}{n_2}$	
Determination of possible ratio	$i$	-	5		6
Calculation of required nominal torque on output	$T_{2Nzulerf}$	Nm	642	$T_{2m} * f_A$	
Determination of size	BG	-	370	Auswahl nach $T_{2Nzul}$ > $T_{2Nzulerf}$	6
Calculation of nominal speed on input	$n_1$	min <sup>-1</sup>	1450	$n_2 * i$	
Calculation of average speed on input	$n_{1m}$	min <sup>-1</sup>	725	$n_{2m} * i$	
Calculation of maximum speed on input	$n_{1max}$	min <sup>-1</sup>	1450	$n_{2max} * i$	
Determination of gearbox efficiency	$\eta$	-	0,97		6
Determination of fatigue strength factor as per table	$f_D$	-	0,8		7
Determination of dynamic factor	$f_K$	-	1,3		8
Determination of nominal torque on output	$T_{2Nzul}$	Nm	560		6
Determination of maximum permissible output torque	$T_{2maxzul}$	Nm	1746		6
Determination of emergency stop torque	$T_{2Notzul}$	Nm	1940		6
Determination of thermal limit power	$P_{thGrenz}$	kW	14,4		6
Determination of permissible, average input speed	$n_{1mzul}$	min <sup>-1</sup>	2000		6
Determination of maximum input speed	$n_{1maxzul}$	min <sup>-1</sup>	3000		6
Determination of permissible radial load at input	$F_{1rmzul}$	N	3810		9
Determination of permissible radial load at output	$F_{2rmzul}$	N	10486		9
Determination of maximum permissible radial load at input	$F_{1rmaxzul}$	N	11000		6
Determination of maximum permissible radial load at output	$F_{2rmaxzul}$	N	18500		6

### 4. Determination of motor values

Calculation of motor nominal output torque	$T_{2NMot}$	Nm	479	$\frac{P_{Mot} * 9550 * \eta * 1}{n_2}$	
Calculation of max. motor torque on output	$T_{2maxMot}$	Nm	1342	$\frac{P_{Mot} * 9550 * \eta * f_5}{n_2}$	

### 5. Comparison of the gearbox with the application

					Condition
Check the motor nominal output torque	$T_{2NMot}$	Nm	479 > 452	$T_{2mz}$	fulfilled
Check the max. motor torque on output	$T_{2maxMot}$	Nm	1342 > 1200	$T_{2max}$	fulfilled
Check the nominal torque on output	$T_{2Nzul}$	Nm	560 > 514	$T_{2m} * f_A * f_D * f_L$	fulfilled
Check the max. permissible output torque (motor)	$T_{2maxzul}$	Nm	1746 > 1744	$T_{2maxMot} * f_K * f_L$	fulfilled
Check the max. permissible output torque (application)	$T_{2maxzul}$	Nm	1746 > 1560	$T_{2maxMot} * f_K * f_L$	fulfilled
Check the emergency stop torque	$T_{2Notzul}$	Nm	1940 > 1600	$T_{2Not}$	fulfilled
Check the power to be transferred	$P_{thGrenz}$	kW	14,4 > 7,1	$\frac{T_{2mz} * n_{2m} * 2 * \pi}{60000}$	fulfilled
Check the permissible, average input speed	$n_{1mzul}$	min <sup>-1</sup>	2000 > 725	$n_{1m}$	fulfilled
Check the maximum input speed	$n_{1maxzul}$	min <sup>-1</sup>	3000 > 1450	$n_{1max}$	fulfilled
Check the radial load at input	$F_{1rmzul}$	N	3810 > 0	$F_{1rm}$	fulfilled
Check the radial load at output	$F_{2rmzul}$	N	10486 > 3000	$F_{2rm}$	fulfilled
Check the maximum permissible radial load at input	$F_{1rmaxzul}$	N	11000 > 0	$F_{1rmax}$	fulfilled
Check the maximum permissible radial load at output	$F_{2rmaxzul}$	N	18500 > 8000	$F_{2rmax}$	fulfilled

1 Max. value of load profile

2 Sum of times in the load profile, including idle time

3 Equivalent torque from load profile

4 Average speed from load profile

5 Valid for all torques  $T_{2i} > T_{2m} * f_A$

6 From the technical data of the gearbox type

7 Fatigue strength factor as per table

8 Dynamics factor as per table

9 From the technical data of the gearbox type, at permissible average input speed

# L

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following four pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

# L TECHNICAL DATA

The following technical specifications in the table are intended only for rough preselection

L			050				
Ratio	i		1,0	1,5	2,0	3,0	4,0

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

Shaft material for the insert shaft: minimum yield strength approx. 360 N/mm<sup>2</sup>.

Recommended shaft fit h6

# M K

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

# M K

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication/grease lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 7035 Light grey
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

LS

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL 9005 Black
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

## TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth:	Klingelnberg spiral bevel gear teeth	Lubrication:	Oil lubrication
Direction of rotation:	The opposite direction when facing C and A	Mounting position:	Any, specify when ordering
Life time:	20000 h L <sub>10h</sub>	Surface protection:	Primer coat RAL RAL 9005 Black
Permissible gearbox temperature at housing:	-10 °C to +80 °C (deviating temperature ranges on request)	Protection rating:	IP 54

**M K S H**

32	70	145	291	124	172	42/41	

Shaft material for the insert shaft: minimum yield strength approx. 360 N/mm<sup>2</sup>.

Recommended shaft fit h6

**Version A**

**Attention! To make sure to transfer the motor torque in case of an emergency stop, it is required to use a motor shaft with keyway.**

It is essential that the motor shaft and the bore on the clamping sleeve are dirt and grease free. Take the clamping bush and fit it to the motor shaft back to the shaft shoulder. Then tighten the coupling screws to the recommended torque. Do this in 3 step eitherway with 20% / 50% and then 100%. The torque which can be found on a sticker on the coupling. Grease the tooth profile of the clamping bush. With the gearbox in the vertical position and the input flange facing upwards mount the motor onto the gearbox and tighten the motor flange/gearbox fixing bolts.

**Version B**

It is essential that the motor shaft and the bore on the profiled bush are dirt and grease free. Take the profiled bush together with the shrink disc and fit it to the motor shaft back to the shaft shoulder. Then tighten the coupling screws to the recommended torque, which can be found on a sticker on the coupling. Grease the tooth profile of the profiled bush. With the gearbox in the vertical position and the input flange facing upwards mount the motor onto the gearbox and tighten the motor flange/gearbox fixing bolts.

**Version C**

The connection between motor and gearbox is made using a shrink disc bush without a keyway. For maximum performance we recommend the use of motors with reduced shaft tolerance and concentricity according to DIN 42955 R standards.

When fitting the motor, position the gearbox vertically with the motor flange upwards. Before assembly, degrease the motor shaft and the blind hole in the gearbox. Remove the lock screw or two plastic plugs from the motor flange of the gearbox, and insert a long Allen key to reach the tangential clamping screw in the coupling. The coupling must first be turned to the correct position for the screw to be accessible. Lower the motor vertically with the motor shaft in the blind hole. Ensure that the motor shaft has completely entered the bore, and that the flanges of motor and gearbox are in contact with each other over their full surface. The motor flange screws can now be inserted (do not tighten them completely). Then tighten the screws of the coupling with the required tightening torque. Do this in 3 steps alternately with 20%, 50% and then 100%.

The torque values for motor mounting can be accessed in our motor mounting manual, which is offered separately. Finish tightening the motor flange screws. After assembly, it is important to reinsert the lock screw or plastic plugs into their holes.
